Faculty of Humanities and Social Sciences

The Learning Hub

A PROJECT REPORT

Submitted to
Department of Computer Application
D.A.V. College

In partial fulfillment of the requirements for the Bachelors in Computer Application

Submitted by
Shreejal Shrestha
6-2-469-32-2024
August, 2026

Under the supervision of
Pesal Rai

Tribhuvan University
Faculty of Humanities and Social Sciences
D.A.V College

SUPERVISOR'S RECOMMENDATION

I hereby recommend that this project prepared under my supervision by Shreejal Shrestha entitled “**The Learning Hub**” in partial fulfillment of the requirements for the degree of Bachelor of Computer Applications is recommended for the final evaluation.

Pesal Rai

SUPERVISOR

Lecturer

The Department of Bachelor of Computer Applications

Jawalakhel, Lalitpur

Tribhuvan University
Faculty Of Humanities And Social Sciences
D.A.V College

LETTER OF APPROVAL

This is to certify that this project prepared by SHREEJAL SHRESTHA entitled “**The Learning Hub**” in partial fulfillment of the requirements for the degree of Bachelor of Computer Applications has been evaluated. In our opinion it is satisfactory in the scope and quality as a project for the required degree.

Pesal Rai Department of Bachelor of Computer Applications Jawalakhel, Lalitpur	Mr. Sudip Adhikari, Program Head Department of Bachelor of Computer Applications Jawalakhel, Lalitpur
---	--

ABSTRACT

“The Learning Hub” is a web-based academic resource-sharing platform designed to make study materials more accessible, organized, and convenient for students. The system provides a centralized platform where users can upload and download academic notes based on course, semester, and subject. To maintain the quality and reliability of shared materials, uploaded notes are reviewed and approved by an administrator before publication. The system also includes features such as ratings, bookmarks, and subject-wise quizzes. Students can use quizzes to test their knowledge, view their results, review wrong answers, and compare their performance through a leaderboard. By combining academic resource sharing with interactive learning and assessment features, “The Learning Hub” aims to encourage collaboration, simplify access to study materials, and support self-learning in an organized digital environment.

Keywords: *The Learning Hub, Academic Notes, Notes Sharing, Study Materials, Online Learning, Note Management, Quiz System, Bookmarking, Note Rating, Leaderboard, Collaborative Learning.*

ACKNOWLEDGEMENT

I would like to sincerely thank the Department of Computer Application, DAV College, for providing me with the opportunity to undertake this minor project as a part of Project 'I'. I am especially grateful to **Mr. Pesal Rai** for his valuable guidance, continuous encouragement, and constructive supervision throughout the ongoing development of this project. His willingness to provide valuable time and feedback despite his busy schedule has been greatly helpful in guiding the project in the right direction.

I would also like to express my sincere appreciation to **Mr. Sudip Adhikari** for his guidance, suggestions, and support during the different stages of the project. I am equally thankful to my friends for their cooperation, useful ideas, and encouragement during the planning and development process.

Finally, I would like to extend my heartfelt thanks to the entire department and to everyone who has directly or indirectly supported and contributed to the progress of this project.

Shreejal Shrestha

CHAPTER 1: INTRODUCTION

1.1 Introduction

The Notes Sharing System is a web-based platform designed to make sharing and accessing academic study materials easier for students. Currently, students often share notes through social media, messaging apps, cloud links, or personal contacts, making it difficult to find relevant materials when needed.

The proposed system provides a centralized platform where students can upload and access notes based on their course, semester, and subject. To ensure the quality and authenticity of uploaded materials, notes are reviewed and approved by an administrator before being published.

The system includes features such as note rating, bookmarking, searching, and filtering. It also provides a subject-wise quiz system that allows students to test their knowledge. Quiz leaderboards and wrong-answer reviews help students track their performance and identify areas for improvement.

The system also offers light and dark mode options to improve user comfort and usability. Overall, the main objective of this project is to create a reliable and organized platform for sharing academic resources, encouraging student collaboration, and supporting self-learning through easy access to study materials and interactive quizzes.

1.2 Problem Statement

Students often face difficulties finding academic notes because study materials are scattered across social media platforms, messaging applications, and personal contacts. These resources are often unorganized, making it time-consuming to locate notes for specific courses and subjects.

Additionally, there is a lack of a centralized platform for sharing and managing academic notes. Students also have limited opportunities to evaluate their understanding through integrated learning tools.

Therefore, a Notes Sharing System is needed to provide organized access to study materials, ensure content quality through admin approval, and support learning through subject-wise quiz.

1.3 Objectives

The main objective of the project is to develop a modern, student-driven notes sharing platform that improves access to academic study materials and supports collaborative learning.

1. To develop a web-based Notes Sharing System for uploading, downloading, searching, and managing academic notes by course, semester, and subject.
2. To implement note verification and assessment features such as admin approval, ratings, bookmarks, quizzes, leaderboards, and result tracking.

1.4 Scope and Limitation

i. Scope

Notes Upload and Download – Users can upload academic notes and download study materials shared by other users.

Admin Approval and Management – Administrators can review, approve, or reject uploaded notes and manage users, notes, and quiz content to maintain the quality of the system.

Rating and Bookmarking – Users can rate notes based on their usefulness and bookmark important notes for future reference.

Subject-wise Quiz System – Users can participate in subject-based quizzes, view their scores, review wrong answers, and compare their performance through a leaderboard.

ii. Limitation

Internet Dependency – The system requires an internet connection to access and share academic notes and use the available online features.

Manual Verification Process – Uploaded notes require administrator approval before they are published, which may cause a delay in making new notes available.

Content Quality Dependency – The usefulness and quality of study materials depend on the content uploaded by users and the administrator's verification process.

Limited Academic Scope – The system is primarily focused on sharing notes and subject-wise quizzes and does not provide advanced learning features such as live classes or video lectures.

1.5 Methodology

The Notes Sharing System will be developed using the Waterfall Model of the Software Development Life Cycle (SDLC). It follows a systematic and sequential approach, where each phase is completed before moving to the next. The major phases include requirement gathering, analysis, design, development, testing, and implementation.

Figure 1.1: Waterfall Model of SDLC

This methodology is suitable for developing the “The Learning Hub” because the main requirements, features, and user roles are clearly defined from the beginning. The Waterfall Model provides a systematic approach to development, making it easier to plan each phase, maintain proper documentation, and manage the project schedule effectively.

1.6 Report Organization

- **Chapter 1:**

This chapter includes the introduction, problem statement, objectives, methodology, scope, and limitations of “The Learning Hub”.

- **Chapter 2:**

This chapter covers the background study and literature review of existing academic resource-sharing platforms and related systems.

- **Chapter 3:**

This chapter presents the system analysis and design of “The Learning Hub”, including functional and non-functional requirements, feasibility study, system diagrams, and system architecture.

- **Chapter 4:**

This chapter focuses on the implementation and testing of “The Learning Hub”, including the development of the user and admin modules and testing of the major system functionalities.

- **Chapter 5:**

This chapter presents the completed features and the tasks that are yet to be completed in “The Learning Hub.”

CHAPTER 2: BACKGROUND STUDY AND LITERATURE REVIEW

2.1 Background Study

Education is increasingly supported by digital technologies, and online educational platforms have become useful for students to access academic notes, study materials, question papers, and other learning resources. Several platforms such as Mero Notes, TU Papers, Uni Bytes, and Mero Sikshya provide digital academic resources to support students in their learning and examination preparation. Mero Notes provides subject-wise notes, study materials, model questions, and exam preparation resources [1]. TU Papers provides previous-year question papers, syllabi, notes, and other academic materials for Tribhuvan University students [2]. Uni Bytes provides study resources and university-related academic information in a centralized environment [3]. Mero Sikshya also provides educational resources and learning materials to support students in their academic activities [4].

The proposed “The Learning Hub” is a web-based platform designed to provide a centralized environment for sharing and accessing academic notes. Users can upload and download notes based on course, semester, and subject, while an administrator reviews and approves uploaded materials before publication. The system also includes note rating and bookmarking features, along with subject-wise quizzes where students can view results, review wrong answers, and compare their performance through a leaderboard. By combining academic resource sharing with interactive learning and assessment features, “The Learning Hub” aims to provide an organized and convenient platform that supports collaboration and self-learning.

2.2 Literature Review

Digital learning platforms provide students with convenient access to academic resources and support flexible learning. Sherpa et al. (2026) [5] found that higher education students in Nepal face challenges such as limited digital devices, internet connectivity, financial constraints, and digital skills when using digital learning resources. Wong et al. (2025) [6] found that consistent engagement with digital learning platforms was associated with academic performance, highlighting the importance of accessible and organized learning

resources. Based on these findings, **The Learning Hub** provides centralized academic notes and study materials along with features such as quizzes, result tracking, ratings, bookmarks, and leaderboards to support students' learning and engagement.

CHAPTER 3: SYSTEM ANALYSIS AND DESIGN

3.1 System Analysis

3.1.1 Requirement Analysis

i. Functional Requirements:

- Notes upload and download – Users can upload notes and download study materials shared by others.
- Notes management – Users can manage their uploaded notes
- Admin approval – Admin can review and approve notes before publishing
- Search and filter options – Users can search notes by course, semester, and subject
- Rating system – Users can rate notes based on usefulness
- Bookmark system – Users can save important notes for later use
- Quiz system – Users can take quizzes based on subjects

Use Case Diagram

Figure 3.1: Use Case Diagram of The Learning Hub

The use case diagram of “The Learning Hub” consists of two main actors: User and Admin. The User can register and log in to the system, after which they can upload and download notes, bookmark useful notes, rate notes, take subject-wise quizzes, view quiz results, review wrong answers, and view the leaderboard. The Admin is responsible for managing users, reviewing and approving or rejecting uploaded notes, managing existing notes, and managing quiz questions to maintain the quality and reliability of the system.

ii. Non- Functional Requirement:

- The system verifies user identities and grants permissions according to assigned roles.
- Secure system
- Works smoothly on desktop and web browsers

3.1.2 Feasibility Study

i. Technical Feasibility

The front end of this web application will be developed with HTML, CSS and JavaScript and for server-side development, we will use PHP. A database named MySQL will be used to store user data, notes, and quiz content. These technologies are used very widely and can run on any normal web browser without requiring any special hardware or software. A local server (like XAMPP) will be used for development and testing.

ii. Operational Feasibility

The system can easily be used by a student and administrator. Users can easily upload, download, and access notes using simple interfaces such as dashboards, forms, and filters. The administrator can also manage and moderate content very easily. Ultimately, the system helps students better share study material and access material and is usable with limited training.

iii. Economic Feasibility

The economic feasibility of the system is achieved by the use of open-source technologies like PHP, HTML, CSS, JS, and MySQL. This reduces the cost of development significantly. In addition to low hosting and deployment costs, the

system’s automation of note sharing and management saves both students and administrators time and effort.

iv. Schedule Feasibility

The time schedule of the different Stages of the project can be seen below in the following Gantt Chart.

Gantt Chart

Figure 3.2: Gantt Chart of The Learning Hub

The Gantt chart shows the project schedule for “The Learning Hub” from May to September 2026. It covers documentation, requirement analysis, system design, development of user and admin modules, testing, bug fixing, and final submission.

3.1.3 Data Modeling

Figure 3.3: ER Diagram of The Learning Hub

The ER diagram shows how users, administrators, notes, quizzes, questions, results, ratings, and bookmarks are connected. Users interact mainly with notes and quizzes, while administrators manage users, notes, and quiz content. The database relationships help “The Learning Hub” organize academic resources and track user learning activities efficiently.

3.1.4 Process Modeling

Figure 3.4: Context Level of The Learning Hub

The DFD Level 0 shows how the User and Admin interact with “The Learning Hub” system. Users can register and log in, upload and download notes, take quizzes, rate and bookmark notes, while the admin manages users, approves uploaded notes, and manages quiz content.

Figure 3.5: DFD Level 0 of The Learning Hub

The Level 1 DFD divides “The Learning Hub” into five main processes. Process 1 manages user registration and login. Process 2 handles note ratings and bookmarks. Process 3 manages quizzes by providing questions, checking answers, and generating scores and leaderboard results. Process 4 manages note uploading, downloading, and searching. Process 5 handles admin approval, where uploaded notes are reviewed and approved or rejected before being made available to users.

3.2 System Design

3.2.1 Architectural Design

Figure 3.6: System Architecture of The Learning Hub

The system architecture of “The Learning Hub” is based on a 3-tier architecture. The Presentation Layer contains HTML, CSS, and JavaScript and is responsible for providing the interface through which users interact with the system. The Application Layer handles the main processing of the system using PHP and Apache, including user requests and system operations. The Data Layer uses MySQL to store and manage information such as users, notes, quizzes, ratings, bookmarks, and quiz results. This structure separates the user interface, system processing, and data storage, making the system organized and easier to manage.

3.2.2 Database Schema Design

Figure 3.7: Database Schema of The Learning Hub

The database schema represents the structure of “The Learning Hub” system. It contains tables for users, notes, quizzes, questions, quiz results, ratings, and bookmarks, which are connected through primary and foreign keys. Users can upload, rate, and bookmark notes, while quizzes contain questions and store users’ results. This structure helps organize and manage academic resources and learning activities efficiently.

3.2.3 Interface Design (UI / UX)

Figure 3.8: Landing Page of The Learning Hub

Figure 3.9: Sign Up Page of The Learning Hub

Figure 3.10: Admin Dashboard of The Learning Hub

Figure 3.11: Student Dashboard of The Learning Hub

CHAPTER 4: IMPLEMENTATION AND TESTING

4.1 Implementation

The implementation of this project focuses on developing “The Learning Hub”, a web-based platform that helps students access, share, and manage academic study materials. The system begins by collecting and organizing important information such as users, courses, semesters, subjects, notes, and quiz content. The collected data is stored and managed in a centralized database to support efficient note management and quiz operations. Users can upload academic notes by providing relevant details such as course, semester, and subject, while the uploaded notes are reviewed by the administrator before being published on the platform.

The system also provides features such as note downloading, ratings, and bookmarks, allowing students to access useful study materials and save important notes for future reference. In addition, the subject-wise quiz module allows users to attempt quizzes, view their scores, review wrong answers, and compare their performance through a leaderboard. The administrator manages users, uploaded notes, approval of materials, and quiz questions to maintain the quality and reliability of the system. The platform is developed as a user-friendly web application that provides academic resource sharing and interactive learning features. The system aims to make study materials more accessible and organized while encouraging collaboration and supporting students in their self-learning and academic preparation.

4.1.1 Tools Used

The following tools and technologies are used for the development of “The Learning Hub”, covering both the front-end and back-end components of the system:

FrontEnd:

- **HTML5 (HyperText Markup Language):** Used to create the basic structure of web pages and organize elements such as text, forms, links, images, and other content.
- **CSS (Cascading Style Sheets):** Used to control the appearance and layout of the website, including fonts, spacing, colors, page structure, and responsive design.
- **JavaScript:** Used to add interactive functionality to the system, handle user interactions, validate inputs, update web content, and communicate with the server.

Backend:

- **PHP:** Used for developing the server-side functionality, processing user requests, and managing communication between the application and the database.

Database:

- **MySQL:** Used to store and organize system data such as user information, academic notes, courses, semesters, subjects, ratings, bookmarks, and quiz records.

Version Control:

- **Git:** Used to track changes in the source code, manage different versions, and maintain the project throughout the development process.

Design & Diagram:

- **Figma:** Used to design the user interface and create layouts that improve the overall user experience of the system.
- **Draw.io:** Used to create various system diagrams, including use case diagrams, flowcharts, data flow diagrams, and other visual representations of the system.

4.1.2 Implementation Details of Module

- **Login Module:** The Login Module manages user authentication and access control. It allows registered students and administrators to securely log in using their email and password. The system identifies the user's role and provides access to the appropriate dashboard.
- **Student Dashboard Module:** The Student Dashboard Module provides students with access to their learning activities. Students can view their uploaded and pending notes, access quizzes, view their quiz results, and navigate through the system.
- **Admin Dashboard Module:** The Admin Dashboard Module provides administrators with centralized management features. Administrators can review pending notes, approve or reject submissions, manage users, and manage quiz-related content.
- **Quiz Module:** The Quiz Module allows logged-in students to select a subject and take quizzes. Questions are retrieved from the database, and the student's score is calculated after completing the quiz.

- **Leaderboard Module:** The Leaderboard Module records quiz scores and ranks students according to their performance. The leaderboard is available only to authenticated users.
- **Notes Module:** The Notes Module allows students to upload academic notes for sharing. Uploaded notes remain pending until they are reviewed and approved by an admin. Once approved, the notes become available for users to view.
- **Admin Approval Module:** The Admin Approval Module allows administrators to review submitted notes and approve or reject them. This ensures that only appropriate and relevant notes are made publicly available.

4.2 Testing

4.2.1 Test Cases for Unit Testing

Table 4.1: Test Case of unit testing for Login Module

SN	Test Case	Test Data	Expected Result	Status
1	Login with valid student credentials	Valid email and password	User successfully logs in	Pass
2	Login with incorrect password	Valid email, wrong password	Error message is displayed	Pass
3	Login with empty fields	Email and password empty	Validation message is displayed	Pass
4	Login with valid admin credentials	Valid admin email and password	Admin is redirected to the admin dashboard	Pass
5	Login with invalid email format	abc@ and password	Invalid email should be rejected	Fail

Table 4.2: Test Case of unit testing for Student & Admin Module

SN	Test Case	Test Data	Expected Result	Result
1	Access student dashboard	Logged-in student	Student dashboard is displayed	Pass
2	Navigate between dashboard sections	Click available sidebar options	Selected section opens correctly without leaving the dashboard	Pass
3	Open Quiz from Student Dashboard	Logged-in student and Take Quiz option	Student is redirected to the Quiz page successfully	Pass
4	View pending notes from Admin Dashboard	Logged-in admin and pending notes	Pending notes are displayed for administrator review	Pass
5	Dashboard displays incorrect user-specific data	Two different student accounts	Each student should only see their own dashboard information	Fail
6	Access dashboard without login	No active session	User should be redirected to the Login page	Pass
6	Display user-specific dashboard information	Logged-in student/admin	Correct user information should be displayed	Pass

Table 4.3: Test Case of unit testing for Quiz Module

SN	Test Case	Test Data	Expected Result	Result
1	Open quiz while logged in	Valid student session	Quiz page is displayed	Pass
2	Access quiz without login	Logged-out user	User is redirected to login	Pass
3	Select an answer	Valid answer	Answer is recorded	Pass
4	Submit completed quiz	Completed quiz	Quiz is submitted successfully	Pass

Table 4.4: Test Case of unit testing for Notes Module

SN	Test Case	Test Data	Expected Result	Result
1	Upload valid note	Valid note and subject	Note is submitted successfully	Pass
2	View pending note	Student's pending note	Pending note is displayed to student	Pass
3	View approved note	Admin-approved note	Note is publicly visible	Pass
4	View rejected note	Rejected note	Rejected note is not publicly visible	Pass
5	Submit the same note twice	Same note file and subject submitted two times	System should prevent duplicate note submissions	Fail

Table 4.5: Test Case for Admin Approval Module

SN	Test Case	Test Data	Expected Result	Result
1	View pending notes	Pending note	Admin can view the note	Pass
2	Approve note	Pending note	Note becomes approved	Pass
4	Reject note	Pending note	Note becomes rejected	Pass
5	Verify five-user upload limit	Five users for one subject	Maximum of five users can upload	Pass

4.2.2 Test Cases for System Testing

Table 4.6: Test Case of System testing

SN	Test Case	Test Data	Expected Result	Result
1	Complete signup and login	New user account	User successfully registers and logs in	Pass
2	Login and access dashboard	Student/admin credentials	Correct dashboard is displayed	Pass
3	Upload and approve note	Student note + admin approval	Approved note becomes visible	Pass
4	Admin approves contribution	Pending contribution	Approved location becomes available to users	Pass

CHAPTER 5: COMPLETED AND TO BE COMPLETED

5.1 Completed

- **Login Module:** User authentication, session management, and student/admin role-based access have been implemented.
- **Signup Module:** User registration and database integration have been implemented.
- **Student Dashboard Module:** The student dashboard and basic navigation have been implemented.
- **Admin Dashboard Module:** The administrator dashboard and role-based management interface have been implemented.
- **Quiz Module:** The quiz database structure, subject selection, login restriction, and quiz interface have been implemented.
- **Notes Module:** The basic note-sharing structure and student/admin workflow have been implemented.
- **Admin Approval Module:** The administrator workflow for reviewing submitted notes has been implemented.
- **Logout Module:** A common logout mechanism for students and administrators has been implemented.

5.2 To Be Completed

- **Quiz Enhancement:** Complete question display, answer submission, score calculation, and result display.
- **Leaderboard Module:** Implement score ranking and display the leaderboard for logged-in users.
- **Notes Enhancement:** Complete note upload processing and public display of approved notes.
- **Admin Approval Enhancement:** Complete approve/reject actions and note status updates.
- **Upload Limit:** Implement the maximum limit of five users uploading notes per subject.
- **Final Testing:** Test all modules together, fix errors, and improve the overall interface.
